

TWENTY ONE

Powerful fly killer for livestock
& agricultural environments

Fast-Acting Control | Easy to Apply
High Coverage | Long-Lasting Action

Twenty One is a professional 10% Azamethiphos WP fly killer developed for rapid, reliable fly control in livestock, poultry and agricultural housing. With both contact and ingestion action, plus added pheromones and attractants, it draws flies to treated surfaces for

fast knockdown and sustained control. The flexible formulation allows application as a spray, paint-on paste or spot treatment, making it ideal for demanding farm environments where speed, coverage and longevity are essential.

Key Benefits:

- Advantages & Benefits Fast-acting Azamethiphos formulation delivers the quickest knockdown available on the UK market, controlling flies within seconds of contact or ingestion.
- Dual contact and ingestion action ensures effective control even where flies are resistant to single-mode treatments, providing rapid relief from heavy fly pressure.
- Pheromone-enhanced formula attracts flies directly to treated surfaces, increasing exposure and improving overall treatment effectiveness.
- Flexible application options allow the product to be sprayed, painted or applied as a paste, giving operators greater control over treatment placement in livestock buildings.
- High coverage performance treats up to 400 m² per pack, delivering efficient protection across large agricultural areas.
- Long-lasting residual activity provides effective fly control for up to 12 weeks, helping maintain lower fly populations between treatments.
- Designed for livestock and agricultural use, making it a trusted professional solution for poultry units, pig housing and animal buildings.
